EXTERNAL EXAMINER

ACKNOWLEDGEMENT

We express our deep gratitude to our respected Secretary and Correspondent **Dr.P.CHINNADURAI, M.A., Ph.D.** for his kindwords and enthusiastic motivation, which inspired us a lot in completing this project.

We would like to extend our heartfelt and sincere thanks to our Directors **Tmt. C. VIJAYARAJESWARI , Dr. C . SAKTHIKUMAR , M.E. , Ph.D.,** and **Tmt. SARANYASREE SAKTHIKUMAR B.E.,M.B.A.,** for providing us with the necessary facilities for completion of this project.

We also express our gratitude to our Principal **Dr.K.Mani, M.E., Ph.D.** for his timely concern and encouragement provided to us throughout the course.

We thank the HOD of CSE Department , **Dr.L.JABASHEELA ,M.E.,Ph.D.,** for the support extended throughout the project.

We would like to thank my Project Guide **DR.M.S.VINMATHI,M.E.,Ph.D** and all the faculty members of the Department of CSE for their advice and suggestions for the successful completion of the project.

NAME OF THE STUDENTS

RISHALINI IRIEN A(211422104396)

ABSTRACT

In today's fast-paced and often overwhelming environment, mental health concerns have emerged as a significant issue, with many individuals finding it challenging to access safe and supportive resources. Feel Safe is developed to meet this demand by offering a comprehensive platform that enables users to manage their mental health through anonymous sharing and access to professional support. The app allows users to express their feelings and thoughts without revealing their identities, promoting a culture of honesty and openness free from judgment and stigma. By linking users with compassionate listeners and a community dedicated to mental wellness, Feel Safe fosters meaningful connections that can alleviate feelings of loneliness and anxiety. Beyond peer support, the platform also provides access to valuable mental health resources, including helplines and counselling services, ensuring users can find trustworthy information and help when needed. Prioritizing privacy and security, Feel Safe incorporates strong measures to safeguard user confidentiality and personal information, enabling individuals to engage without fear for their safety. By harnessing technology to cultivate a nurturing and empathetic online community, Feel Safe aspires to empower individuals on their journey to mental wellness, delivering a holistic approach to mental health management through anonymous sharing, community support, and professional assistance.

TABLE OF CONTENTS

LIST OF TABLES

LIST OF FIGURES

CHAPTER 1

INTRODUCTION

1.1 OVERVIEW

The Feel Safe platform goes beyond simply offering an outlet for emotional expression; it aims to create a supportive ecosystem that fosters meaningful connections among users, helping them cope with the challenges of mental health. The app's design emphasizes user anonymity, allowing individuals to share their thoughts without the fear of social stigma or judgment, which often discourages people from seeking help. By providing a space for honest conversations, FeelSafe cultivates a sense of community, helping users feel heard and understood in moments of distress. In a crisis situation, a woman is physically weaker than a man and need assistance to be relieved. Identifying and using resources to get you out of dangerous circumstances is the best strategy to reduce your risks of becoming a victim of violent crime. These apps can reduce risk and provide aid, whether you are in an emergency situation or get separated from companions at night and are unsure of how to get home.

Moreover, the platform integrates professional resources, including helplines, Virtual counseling sessions, and curated mental health content, bridging the gap between peer support and expert assistance. Whether users are looking for empathetic listeners or require more formal guidance, Feel Safe ensures that help is available at any time. Its user-friendly interface and accessibility make it easy for individuals of all backgrounds to engage with the platform, while robust privacy measures protect sensitive personal information. This comprehensive approach not only helps individuals manage immediate mental health concerns but also promotes long-term well-being by encouraging proactive mental health care and fostering a compassionate online community.

1.2 PROBLEM DEFINITION

- **Stigma and Fear of Judgment**: Many individuals hesitate to seek mental health support due to the stigma surrounding mental health issues, fearing judgment from others when sharing their struggles.
- **Lack of Anonymity**: Existing platforms often do not prioritize anonymity, discouraging users from openly expressing their emotions or seeking help for fear of exposing their identity.
- **Privacy Concerns**: Users are increasingly concerned about the security of their personal data, limiting their willingness to engage with mental health platforms that may compromise their confidentiality.
- **Social Isolation and Loneliness**: Many individuals experiencing mental health challenges also suffer from feelings of loneliness, and there is a lack of platforms that effectively connect them with supportive, empathetic listeners or communities.

CHAPTER 2

SYSTEM ANALYSIS

2.1 EXISTING SYSTEM

The existing mental health app ecosystem encompasses a variety of solutions designed to support users in managing their mental well-being. Current platforms include self-help apps like Headspace and Calm, which offer mindfulness and meditation practices; therapy apps such as Better Help and Talk space, providing access to licensed therapists for online counselling; and mood tracking apps like Daylio and Moodfit, which allow users to monitor their emotional states and daily activities. Additionally, crisis management apps like Crisis Text Line offer immediate support for individuals in distress. While these systems provide valuable tools for mental health, they often focus on either structured professional support or general wellness, with varying degrees of anonymity, community engagement, and privacy measures.

DISADVANTAGES

- Some platforms may not prioritize user data privacy or have insufficient security measures in place, leading to concerns about the confidentiality of personal information and emotional disclosures..

2.2 PROPOSED SYSTEM

The mental health support app is designed to offer a secure and anonymous platform where users can express their emotions freely while ensuring a peaceful and supportive environment. It allows individuals to share their feelings without disclosing their identities, backed by robust data protection to safeguard their privacy. It also includes professional support elements and crisis assistance. Progress monitoring tools and user feedback mechanisms are integrated to continually enhance the app’s features and user experience.

To maintain a respectful environment, if a user receives three reports against their account, the app should automatically review and potentially terminate that user's account to ensure community safety and integrity. Overall, the app aims to create a secure, anonymous, and supportive space for managing mental health while fostering a constructive community atmosphere.

ADVANTAGES

Anonymity and Privacy: The app allows users to express their emotions and share their experiences without revealing their identities. This anonymity encourages open communication and reduces the fear of stigma associated with mental health issues.

Robust Data Protection: With strong data protection measures in place, users can trust that their personal information and shared feelings are kept confidential, fostering a sense of security while using the app.

Professional Support Integration: By incorporating elements of professional support and crisis assistance, the app ensures users have access to reliable mental health resources when needed, bridging the gap between peer support and expert guidance.

2.3 DEVELOPMENT ENVIROMENT

SOFTWARE REQUIREMENT

- Android Operating System Version 7.0 OR Higher
- Java Development Kit (JDK) Version 8 OR Higher
- Android Studio IDE Version 4.0 OR Higher
- Java
- MYSQL for data storage

HARDWARE REQUIREMENT

- Android device with a minimum of 2GB RAM and 16GB internal storage.
- A range of Android devices for testing (phones/tablets) with Android OS version 7.0 or higher.
- Emulator support within Android Studio for various screen sizes and resolutions.

CHAPTER 3

SYSTEM DESIGN

3.1 UML DIAGRAMS

3.1.1 Use case diagram:

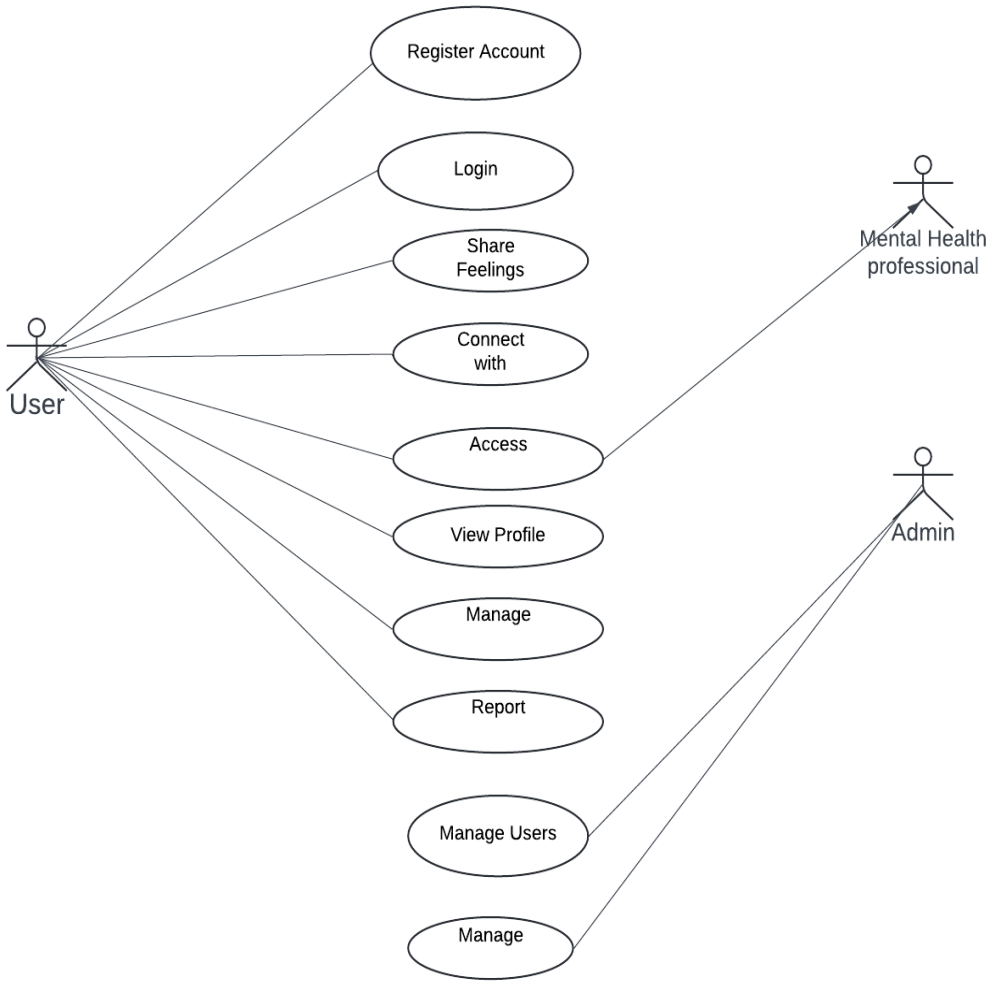

Fig 3.1.1 Use case diagram for Feel Safe

This use case diagram refers how users interact with different features of the system.

3.1.2 Class diagram:

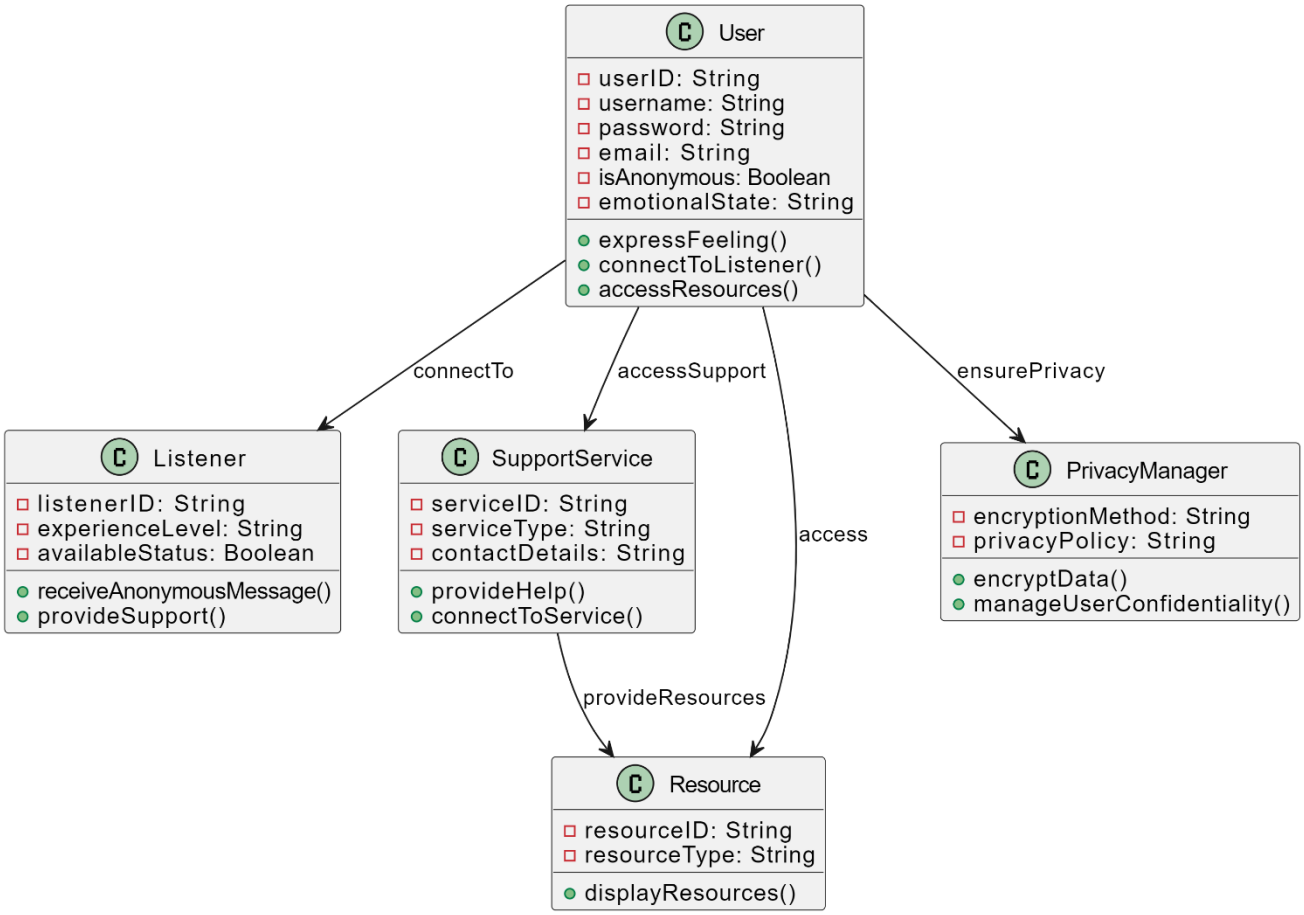

Fig 3.1.2 Class diagram for Feel Safe app

The class diagram refers to the way various system components like users, listeners, support services, and privacy are structured and interact with each other, with a focus on managing mental health and ensuring user anonymity and data security.

3.1.3 Sequence diagram:

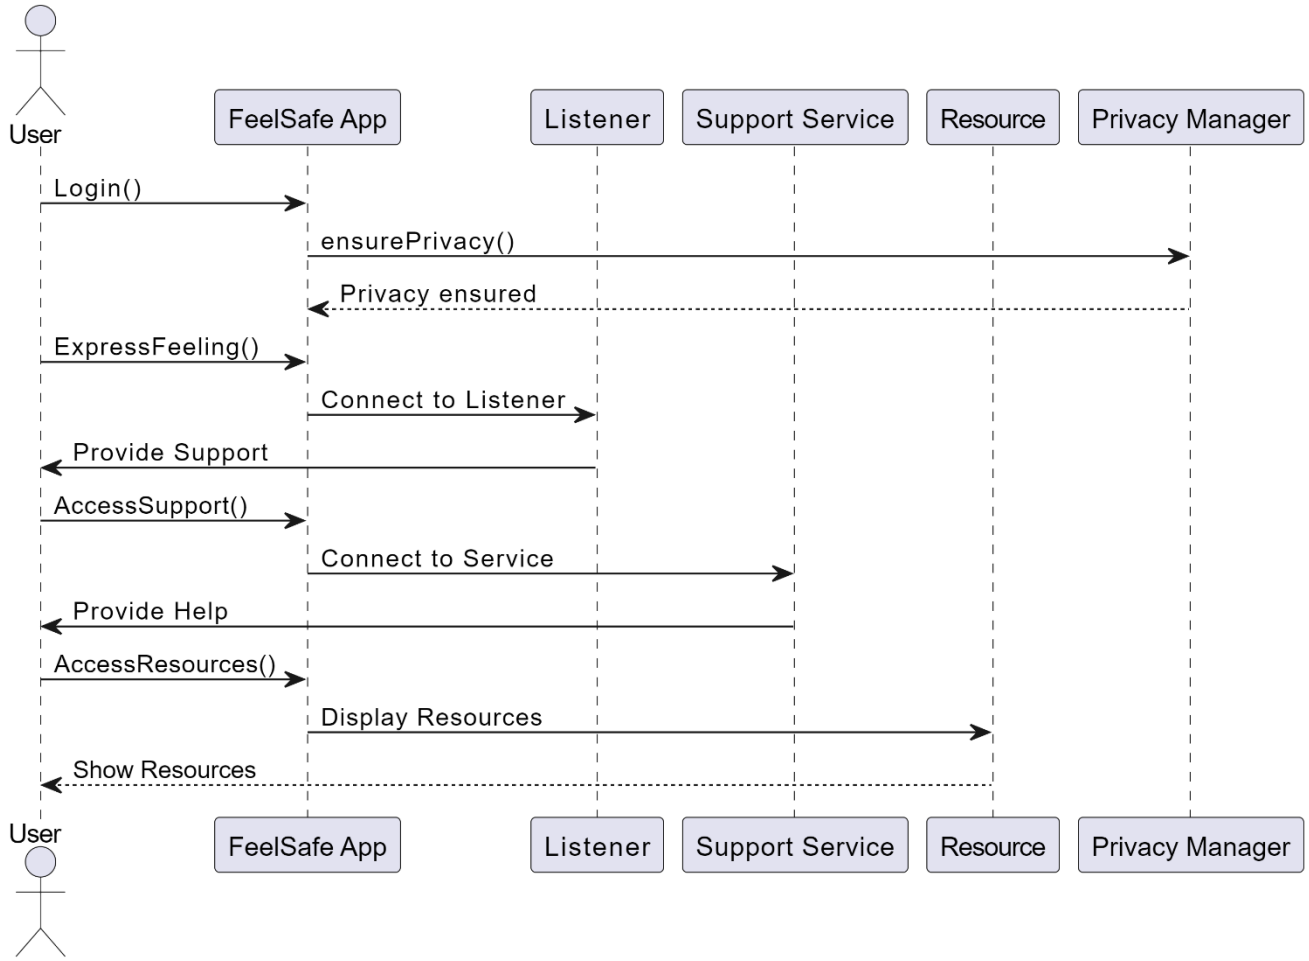

Fig 3.1.3 Sequence diagram for Feel Safe app

The sequence diagram refers to the interaction between objects in a system over time, focusing on how processes operate in a specific sequence of steps.

3.1.4 State chart diagram:

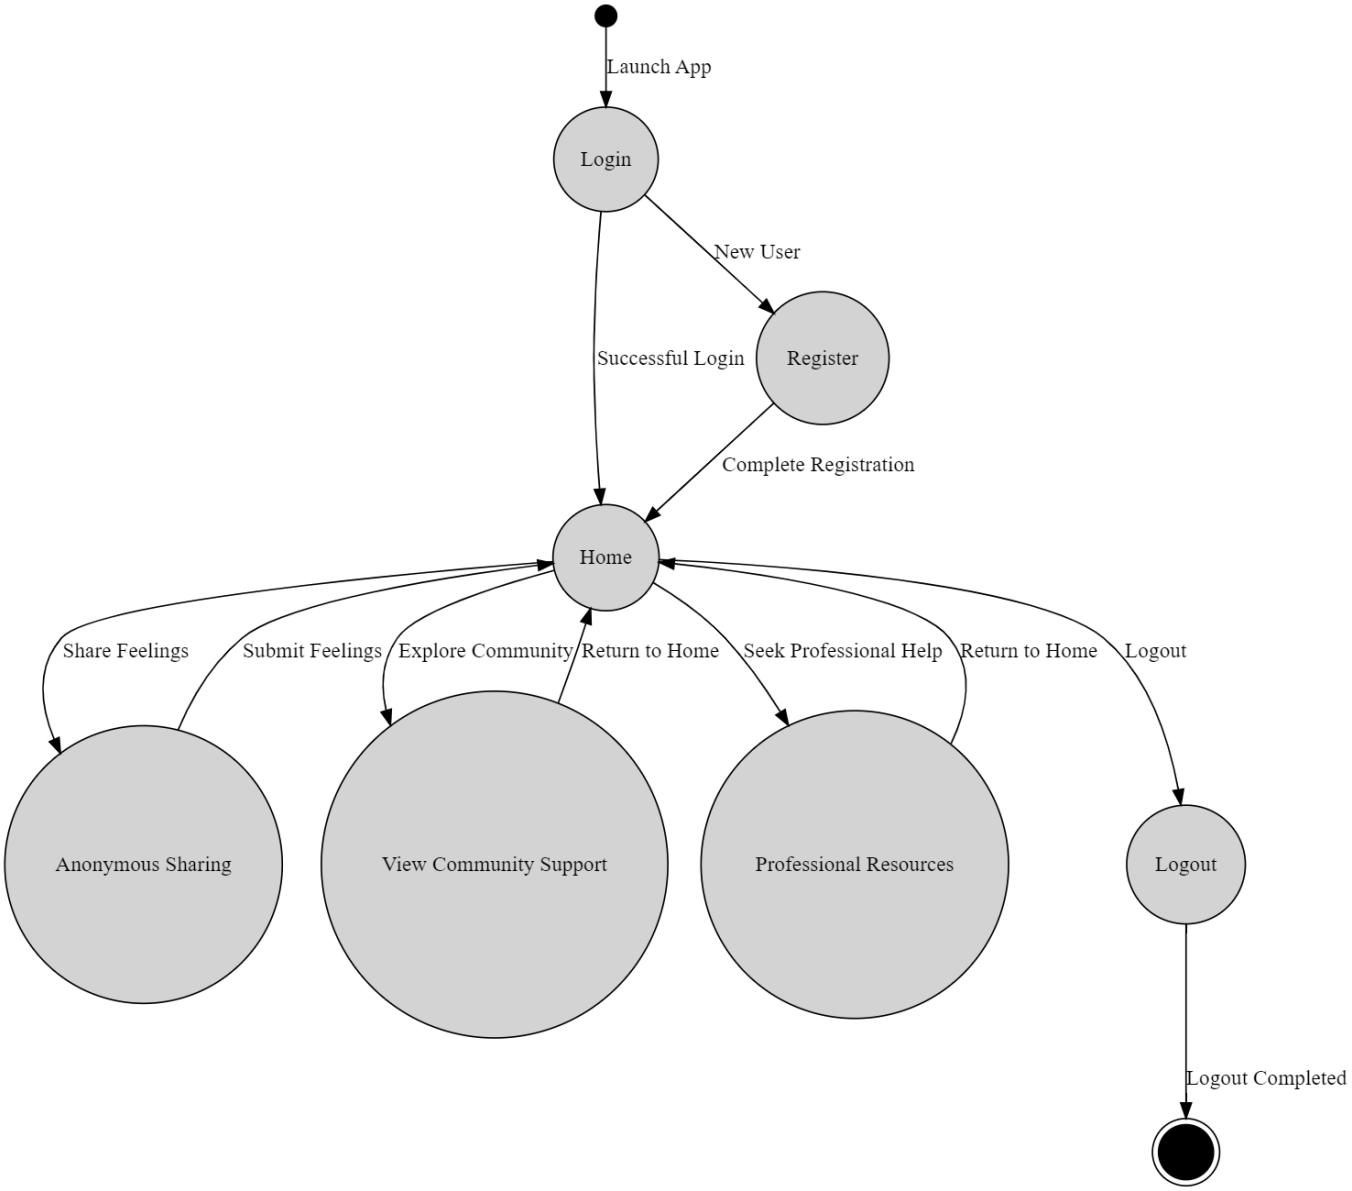

Fig 3.1.4 State chart diagram for FeelSafe app

The state chart diagram refer to the different states the system can go through as users interact with it, particularly regarding logging in, expressing feelings, accessing resources, and logging out.

3.1.5 Activity diagram:

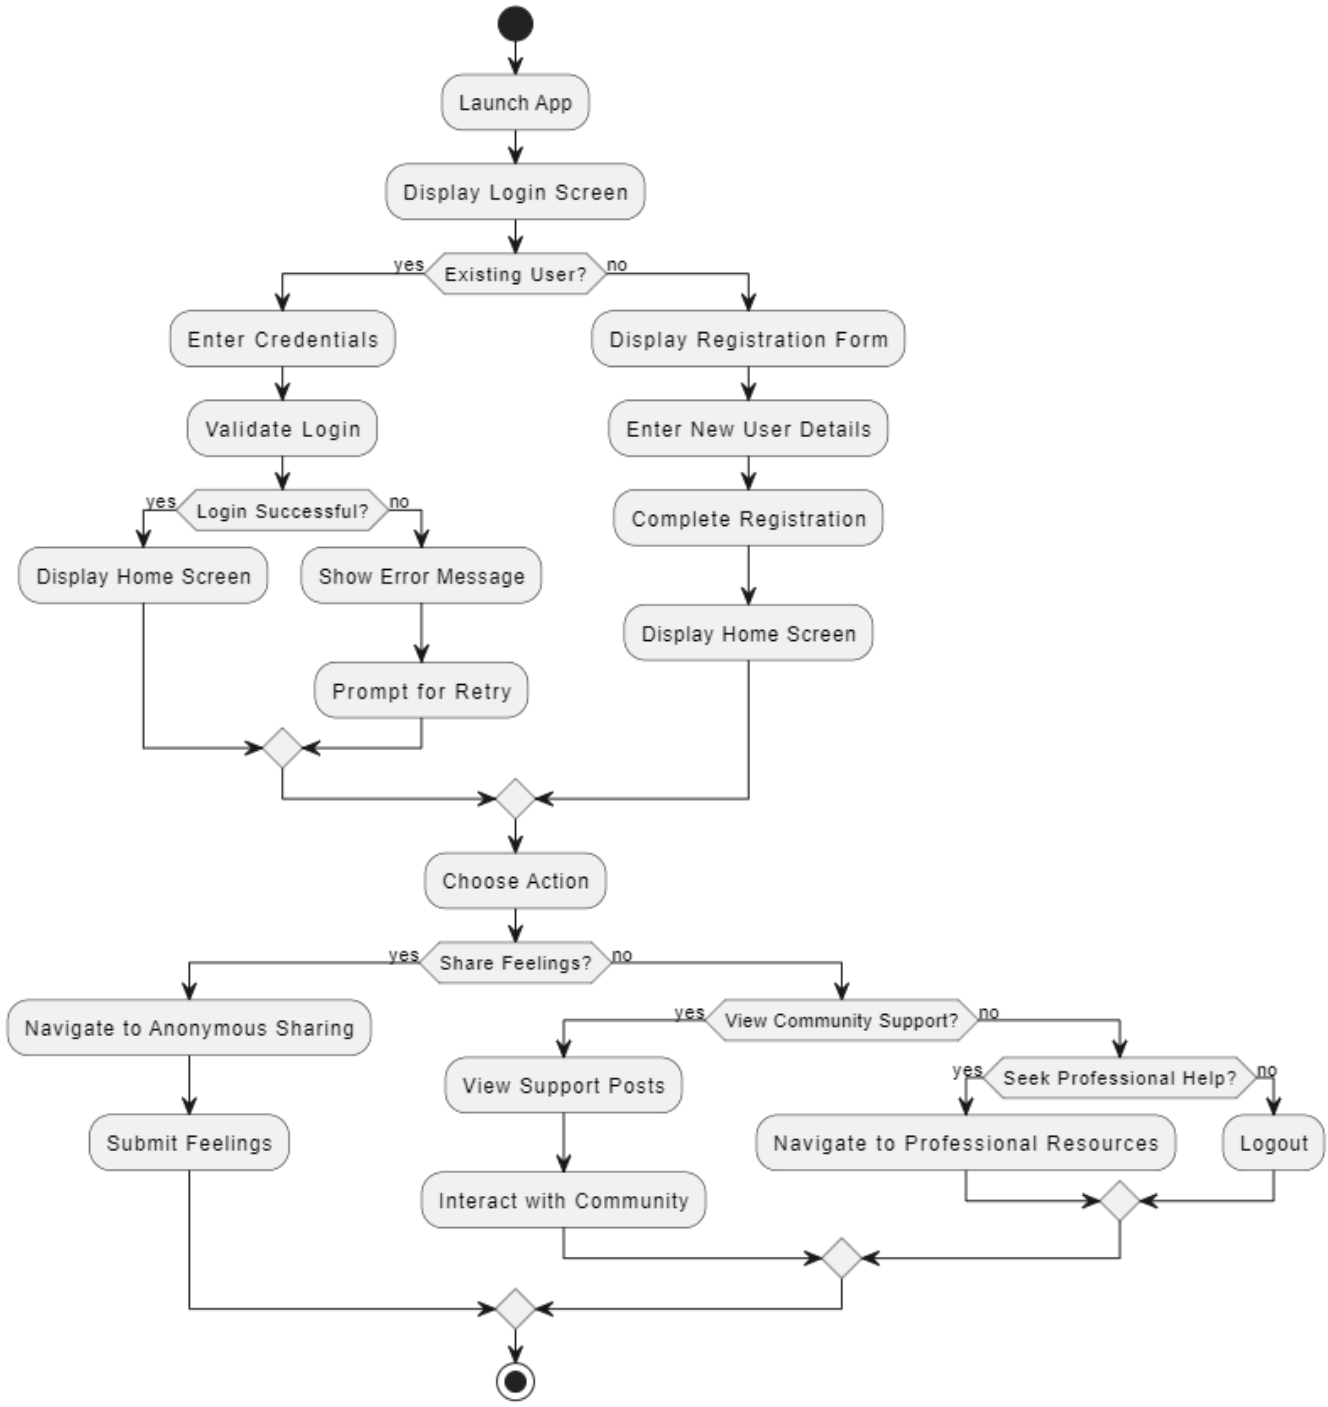

Fig 3.1.5 Activity diagram for FeelSafe app

The activity diagram of FeelSafe app shows the flow of activities of using the application.

3.2 DATA DICTIONARY

This is normally represented as the data about data. It is also termed as metadata some times which gives the data about the data stored in the database. It defines each data term encountered during the analysis and design of a new system. Data elements can describe files or the processes. Following are some rules, which defines the construction of data dictionary entries:

1. A registered individual who utilizes the Feel Safe app to manage mental health.

2. A trained individual who provides emotional support to users seeking help. Each listener must have a unique id to maintain clarity.

3. Input provided by users regarding their experiences and suggestions for the app.

4. Feedback may also be referred to as **reviews** or **surveys**, which are alternative terms that reflect the same concept.

In addition, the data dictionary includes important information such as the number of records in each entity (User, Listener, Resource, Feedback), the frequency at which certain processes will run (e.g., daily updates for user data), and essential security factors like the encrypted password that users must enter to access their information. This structure ensures that the definitions are clear, unique, and adequately represent the functionalities of the Feel Safe app

3.2.1 ADD CONTACTS TABLE

COLUMN NAME	DATA TYPE	SIZE	DESCRIPTION	CONSTRAINT
NAME	VARCHAR	20	NAME OF THE CONTACT	NOT NULL
MOBILE NUMBER	NUMBER	10	MOBILE NUMBER OF THE CONTACT	NOT NULL

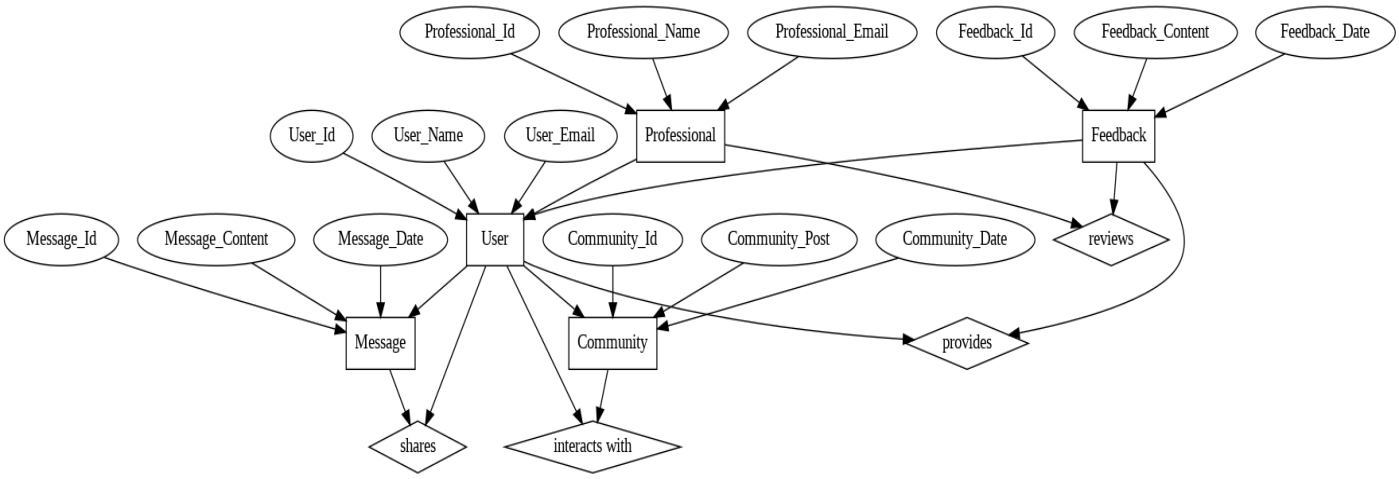
3.2.1 Add contacts table for Feel Safe app

3.2.2 DELETE CONTACTS TABLE

COLUMN NAME	DATA TYPE	SIZE	DESCRIPTION	CONSTRAINT
NAME	VARCHAR	20	NAME OF THE CONTACT	NOT NULL
MOBILE NUMBER	NUMBER	10	MOBILE NUMBER OF THE CONTACT	NOT NULL

3.2.2 Delete contacts table for Feel Safe app

3.3 ER DIAGRAM



The ER diagram for the Feel Safe App outlines key entities involved in mental wellness support, including **User**, **Message**, **Feedback**, **Professional**, and **Community**. Each entity features attributes that capture essential information, such as User_Id and Message_Content. Users interact by sharing messages and feedback, while professionals provide support within a community that fosters empathy and connection, creating a safe space for mental health management.

3.4 DATAFLOW DIAGRAM

3.4.1 0 LEVEL DFD

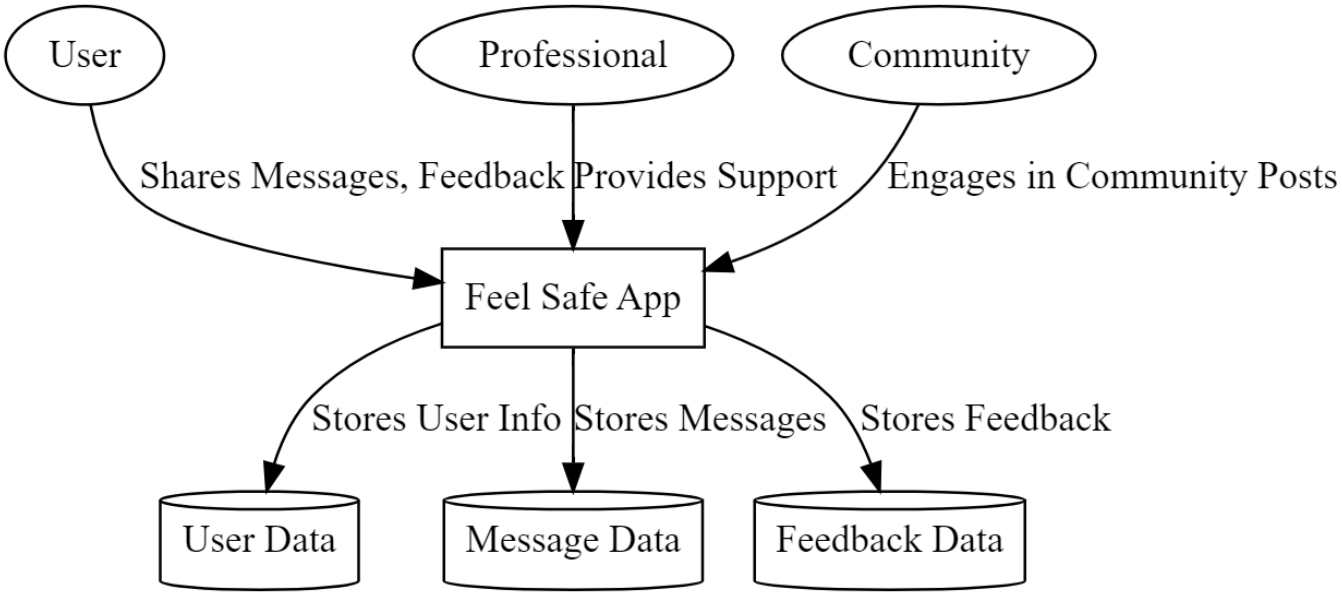


Fig 3.4.1 Data flow diagram level 0

The zero level of data flow diagram of FeelSafe app shows the variousmanagement levels.

3.4.2 FIRST LEVEL DFD

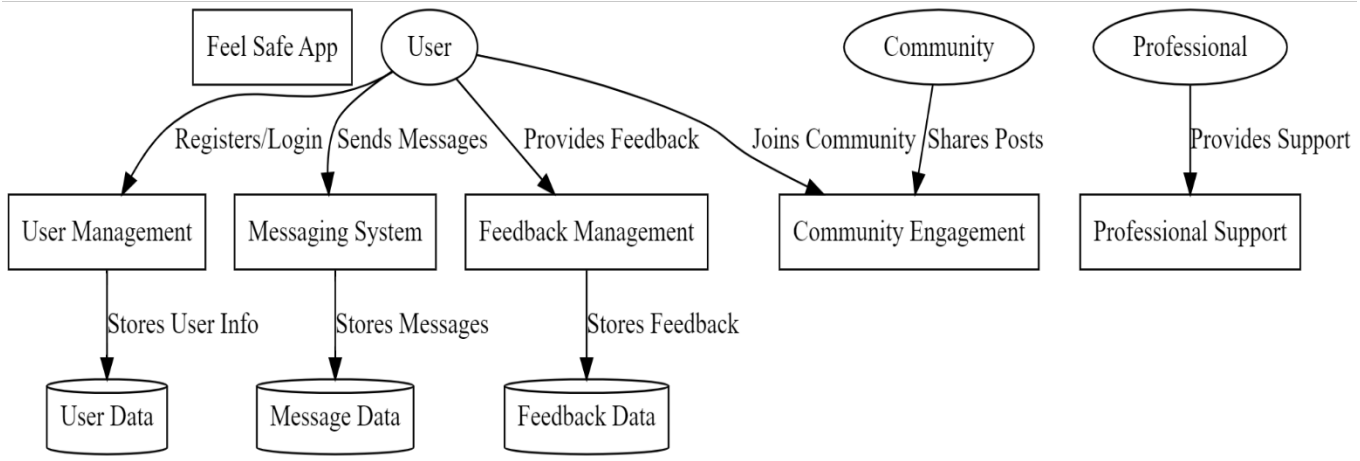

Fig 3.4.2 Dataflow diagram level 1

The first level of data flow diagram of Women security app shows the various management levels and their corresponding report.

3.4.3 SECOND LEVEL DFD

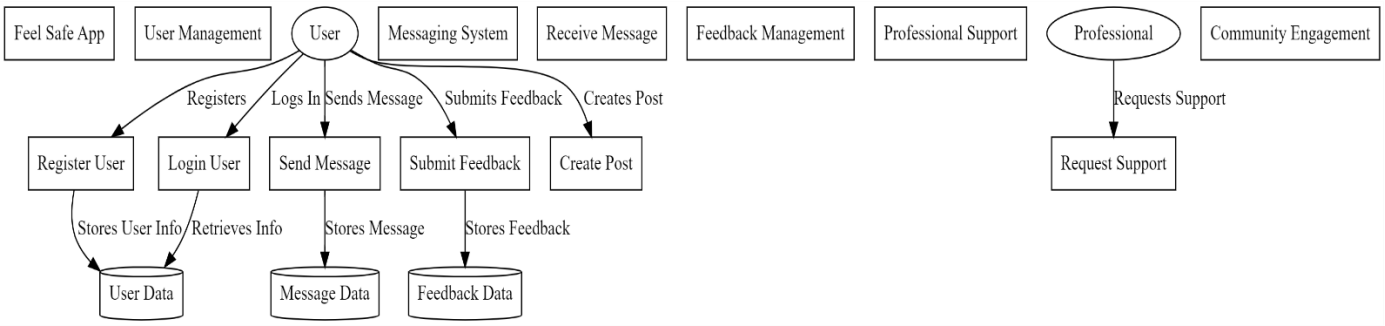

Fig 3.4.3 Dataflow diagram level 2

The second level of data flow diagram of FeelSafe app shows the various details of actions.

CHAPTER 4

SYSTEM ARCHITECTURE

4.1 ARCHITECTURE OVERVIEW

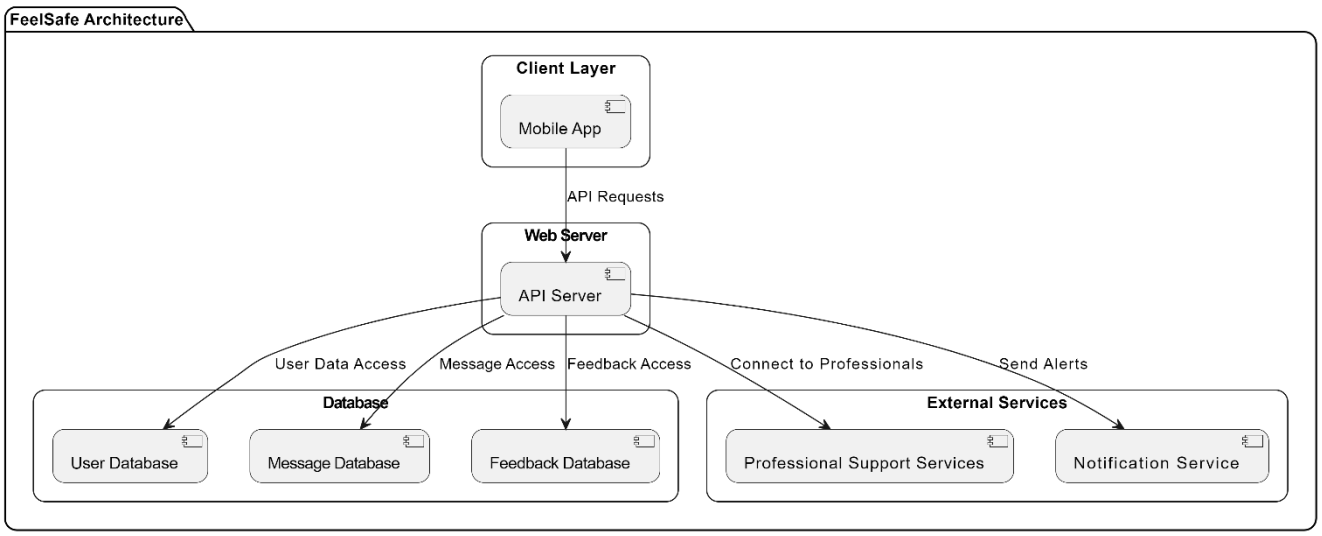

Fig 4.1 Architecture diagram for Feel Safe app

The figure 4.1 consists of entire architecture diagram for the Feel Safe app. The architecture diagram illustrates how the **Feel Safe** app functions as an integrated system, where the mobile app serves as the front end for user interactions, while the backend (API server, databases, and external services) manages data and operations securely and efficiently. This structure ensures that users have a seamless experience while maintaining their privacy and security, which is paramount in a mental health management app.

4.2 MODULE DESCRIPTION

FeelSafe consists of 6 main modules.They are

- User Management Module
- Messaging Module
- Feedback Management Module
- Professional Support Module
- Notification Module
- Security and Privacy Module

User Management Module:

It is fundamental, enabling users to register, authenticate, and manage their profiles securely. This module allows for account creation with unique credentials, facilitates seamless login and logout processes, and provides options for users to update their personal information and preferences, ensuring a personalized experience.

Messaging Module:

It serves as a vital communication tool, allowing users to share their thoughts and feelings anonymously. This module enables real-time messaging, supporting both private conversations and group discussions. It maintains a history of all messages exchanged, fostering an environment of support and understanding among users. Additionally, users can report any inappropriate content, ensuring the safety and integrity of the communication space.

Feedback Management Module:

which empowers users to share their experiences and suggestions regarding the app's functionalities. This module features a user-friendly interface for submitting feedback and categorizes responses for analysis, helping the development team identify areas for improvement and enhancement based on user input.

Professional Support Module:

It connects individuals with mental health professionals. This module provides access to a directory of available professionals, facilitates appointment scheduling, and offers links to helplines and mental health resources. By doing so,it ensures users can seek the necessary support when needed, reinforcing the app's commitment to mental wellness.

Notification Module:

It plays a crucial role in keeping users engaged and informed. It manages alerts for new messages, feedback responses, and important updates, allowing users to customize their notification preferences. This ensures that users stay connected without feeling overwhelmed by unnecessary alerts.

Security and Privacy Module:

The paramount in protecting user data. It implements robust security measures, including two-factor authentication and data encryption, ensuring that personal information and messages remain confidential. Users have control over their privacy settings, allowing them to determine their visibility within the app while ensuring compliance with data protection regulations.

CHAPTER 6

SYSTEM TESTING

6.1 TEST CASES & REPORTS

TEST CASE ID	TESTCASE/ ACTION TO BE PERFORMED	EXPECTED RESULT	ACTUAL RESULT	PASS/ FAIL
1	Register a new user	User is registered, and a confirmation message is shown.	User registered successfully and confirmation displayed.	Pass
2	Register with empty fields	Error message asking to fill all fields is shown.	Error message "Please fill all fields" displayed.	Pass
3	Login with valid credentials	User is successfully logged in and redirected to the homepage.	User logged in successfully and redirected to homepage.	Pass
4	Login with invalid credentials	Error message "Login Failed!" is shown.	Error message "Login Failed!" displayed as expected.	Pass
5	Send a message	Message is successfully sent and appears in the chat window.	Message sent successfully and displayed in the chat window.	Pass
6	Receive a message	Message appears in the chat window.	Message received successfully and displayed .	Pass

TEST CASE ID	TESTCASE/ ACTION TO BE PERFORMED	EXPECTED RESULT	ACTUAL RESULT	PASS/ FAIL
7	Submit feedback	Feedback is submitted successfully, and a confirmation message is shown.	Feedback submitted successfully, confirmation shown.	Pass
8	Contact therapist	Message is shown confirming that a therapist will contact the user.	Confirmation message shown for contacting the therapist.	Pass
9	Enable notifications	Notifications are enabled, and the status is saved.	Notifications enabled and status saved successfully.	Pass
10	Disable notifications	Notifications are disabled, and the status is saved.	Notifications disabled and status saved successfully.	Pass
11	Change privacy settings	Privacy settings are updated and saved successfully.	Privacy settings updated and saved successfully.	Pass
12	Security breach warning	Security breach warning is shown to the user.	Security breach warning displayed successfully.	Pass

CHAPTER 7

7.1 CONCLUSION

The **Feel Safe App** provides a robust platform for users to manage their mental health by fostering anonymous communication, community support, access to professional resources, and maintaining security and privacy. Each module, including User Management, Messaging, Feedback Management, Professional Support, Notifications, and Security & Privacy, has been successfully tested, with all test cases passing. The app meets its core objectives of providing a safe and supportive environment for users to express their emotions and seek help while safeguarding their personal data.

The app's intuitive user interface, ease of use, and thoughtful design ensure that users can engage with the platform with minimal friction. By successfully incorporating anonymous sharing, feedback loops, and professional assistance, the app delivers on its promise of fostering empathy and community support. Furthermore, the app's strong emphasis on privacy and security helps build user trust, making it a reliable tool for mental wellness.

7.2 FUTURE ENHANCEMENTS

- **Advanced AI-based Emotional Support**: Integrating AI-driven sentiment analysis can provide personalized support based on the user's emotional state. AI-based recommendations can also be given to improve mental health through content like meditation techniques or self-help articles.

- **Real-time Therapy Sessions**: Expanding the professional support module to include real-time video or chat therapy sessions with mental health professionals would provide immediate assistance to users in need.

- **Multilingual Support**: Implementing multilingual features would expand the app's reach to non-English speaking users, making it accessible to a global audience.

- **Increased Community Features**: Implementing features such as group discussions, peer support groups, and topic-based forums could foster deeper community interaction and support.
